1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoshimura et al (US 5,444,537).

See column 4, line 56 through column 5, line 37. The determination of the position of the point "p" is made by determining the intensity of the detected light at that point, and the distance determination is made relative to a reference point "q" independently of data from other points and independently of the time of flight of the light. There are embodiments disclosed in the reference in which the spatial and/or optical relationship between the image sensor and the surface is altered, and the position determined from a variation of the observed signal from the point as the signal is moved.

The use of any known type of sensor capable of receiving the intensities at the point of interest would have been obvious. The system of the reference compares the intensity at the location under different (illumination) conditions to compensate for non-homogeneous environments of surface.

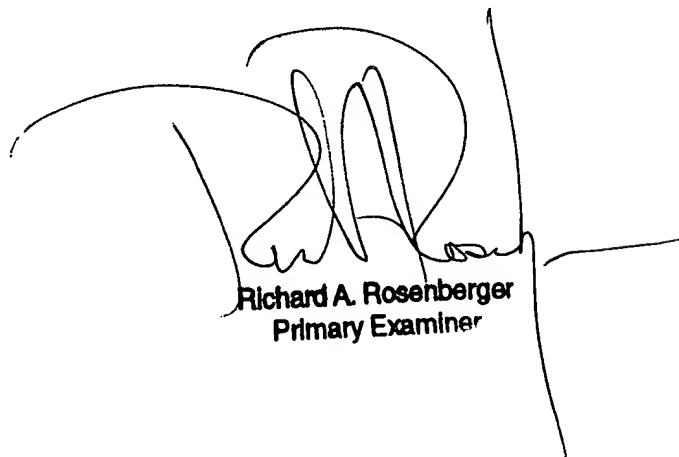

3. DiMatteo et al (US 4,443,706) shows a similar system in which the detected intensities of points are used to determine the position of the points (see the abstract, lines 14-16).

4. Papers related to this application may be submitted to Group 2800 by facsimile transmission. The faxing of such papers must conform to the notice published in the Official Gazette, 1096 OG 30 (15 November 1989). The fax number is (703) 308-7722.
